- Trendy Techniques

Clinical and Forensic - A Lot of Overlapping Areas

Customers Expectations/Requirements

I want to perform targeted screening with database/library searching	 I want to be able to screen samples using a database of at least 1000 compounds I want to be able to use offline and online spectral libraries
I want to identify unknown and need retrospective analysis	 I want to search for totally unknown compounds in addition to targeted screening I need to retrospectively interrogate a sample searching for new/unexpected compounds
I want to do quantitation	 I want ultimate sensitivity I want to quantify small concentrations in heavy matrices I want to quantify more than 1000 compounds in a run

Screening Approaches – Some Definitions

Targeted Screening "Search for what you know"	 Compound search after targeted acquisition using a specific list of compounds Detection parameters need to be numerous and selective to avoid false positives
Untargeted Screening "Search for what you suspect"	 Compound search following acquisition based on most intense signals NOT on a list of compounds Identification based on compound databases and/or spectral libraries
Unknown Screening "Search for the rest"	 Search of compounds with an totally untargeted acquisition Putative identification typically followed by structural elucidation

Screening Workflow

Front Ends and Sample Preparation

Third Party Vendors Ion Sources

- Paper Spray (Prosolia)
 - No sample preparation

LDTD (Phytronix)

• Some sample preparation

- DART (IonSense, Inc.)
 - Some or no sample preparation

TurboFlow for Online Sample Extraction

- Online sample extraction that adds less than 2 minutes to the normal LC runtime
- Allows for the direct injection of complex matrices
- A cleaner sample reaches the mass spec
 - less background noise \rightarrow better sensitivity
 - longer LC column lifetime
 - cleaner mass spec \rightarrow less routine cleaning
- You can inject more (up to 100µL)
 - better sensitivity

Paperspray – No Sample Preparation

Paperspray on TSQ Quantiva – DoA Quantification in Urine

- LOQs in the 0.5 to 50 ng/mL
- LODs in the 0.5-1 ng/mL
- No sample preparation
- No chromatography

Amitriptyline Amphetamine Cocaethylene Cocaine Codeine Methamphetamine PCP Temazepam

Mass Spectrometers – A Leading Portfolio

Triple Quadrupoles for Targeted Screening and Quantitation

TSQ Endura

Extreme Quantitative Value

- Best-in-class performance
- Unprecedented usability
- Exceptional robustness

Extreme Quantitative Performance

- Attogram sensitivity
- Unprecedented usability
- Exceptional robustness

Triple Quadrupoles for Quantitation

- Quantitation of 72 Drugs of Abuse on Urine on TSQ Quantiva
 - Simply dilute-and-shoot
 - Polarity switching
 - One SRM for quantitation and one or two for confirmation
 - Calibration range 5 to 5000 ng/mL

Why Q Exactive and Q Exactive Focus MS for Forensic Labs?

Versatile lab of the future

- Targeted screening
- Untargeted screening
- Unknown screening
- Quantitative confirmation

Ultimate performance

- High sensitivity
- High selectivity
- High Resolution & Mass Accuracy
- Polarity switching

Ease of use

- Simple calibration, holds for days
- No need for optimization
- No compound-specific setup
- Robust platform, low maintenance

Affordable Focus version

• Price comparable to high end Triple Quad

Your High Resolution Accurate Mass lab of the future

Resolution vs. Competition

Outperforming High Res QTofs by a factor >5
 2013 Fusion by a magnitude

Race for Resolution – Q Exactive vs. Q-Tof

Nature and Science Family of Publications: Orbitrap vs Competition

Nature and Science Family of Publications 2015: Orbitrap vs QTOFs

1st Rule of High Resolution Accurate Mass Quantitation

You can't quantify, what you can't detect.

Benefits of Using Q Exactive for Screening

Resolving power	Separate target compounds from interference
Mass stability and mass accuracy	Calibration maintained for days to weeks Unrivaled scan to scan mass accuracy and precision
Fast polarity switching	Quick positive-negative switch maintaining accurate mass/charge determination
No trade-off between resolution and sensitivity	Both resolution and sensitivity are retained
Minimum scan to scan variance	Excellent signal/noise, no need for averaging
Experiment flexibility	Easy to use, a plug and play device

Screening Approach Using a Q Exactive

Fragmentation types:

1. "Confirmational MS2" for targeted screening

Triggers all compounds of a specific list

2. "Discovery MS2" for untargeted screening

Triggers compounds having the highest intensity

3. "AIF" or "vDIA" MS2 for unknown screening

Fragments everything

 New in 3.3, allows for screening for unknowns in conjunction with quan or targeted screening

Providing a complete quantitation and screening workflow for routine applications

TraceFInder WorkFlow for Targeted / Untargeted Screening

TraceFinder and Targeted / Untargeted Screening

 multiple forms of confirmation: spectral library, MS/MS2 database, isotopic pattern confirmation

TraceFinder and Targeted / Untargeted Screening

• multiple forms of confirmation: spectral library, MS/MS2 database, isotopic pattern confirmation

TraceFinder and Targeted / Untargeted Screening

• multiple forms of confirmation: spectral library, MS/MS2 database, isotopic pattern confirmation

New in TraceFinder 3.3 – Unknown Screening

The Importance of Databases and Spectral Libraries

Compound Discoverer 2.0

Compound Discoverer 2.0

- Unknown compound detection
- Automatic background filtering
- Composition prediction
- Mass list search
- Pattern Scoring
- Search mzCloud
- Search ChemSpider

Unknown Screening

- Targeted Screening using dabatase/library is one approach
 - 10 new Street drugs every week Impossible to keep database up-to-date.
 - Need for an alternative approach
- Impossible to use ChemSpider only.
 - 28 millions of structures
 - Codeine $C_{18}H_{21}NO_3$: 4902 structures in ChemSpider

mzCloud™

- A novel mass database/library of MS/MS and MSⁿ spectra (140.000 FWHM at m/z 200)
- Structural info for compounds even if they are not represented in the library through identification of substructures
- Multi-energy, Multi-fragment level, Multi-fragment technique
- Open consortium to establish a large public domain library which our
